

Student Transportation Problem

Problem Statement:

- Students need a safe and reliable source of transportation available whenever necessary that doesn't rely on waiting for a specific time.

Who this affects:

- This affects every college campus. This includes the school, students, parents, and anyone involved around campus.

Details:

- Students at many colleges around the world do not have a safe, reliable source of rides. We all know about uber, buses, or even just getting a ride from a friend. However all of these have their flaws, some are unsafe, others may not be available at that time, and sometimes you just don't have time to wait. I am introducing a school run carpool system. All students can apply meaning you will have many more drivers. All students will be able to put whatever reasoning they have behind needing the ride so all the more important situations would be handled first. I believe this would be a perfect idea because it benefits everyone involved.
